

Greetings!

We thank you for choosing to buy one of our Poodle Puppies. Please read through our important reminders below to ensure the proper care of the new member of your family.

When a puppy is in a new environment, which may be a stressful experience, it takes some time for it to adapt to change. As the new pup transitions to the new environment, it will be helpful to follow these guidelines:

Make his/her life less stressful by:

1. Not bathing him / her for (3) days after we release the pup to you.
2. Not immediately changing the dog food that he/she is used to eat. If you decide to give him/her a different brand of dog food, you can change the food one week after we release the pup to you. Please transition the pup to the new dog food slowly. This means that you need to follow this proportion: **(Dog Food Brand is "Beef Pro" Puppy or Pedigree Puppy)**.

1st week: give 75% of the current dog food and 25% of the new dog food
2nd week: 50% of current and 50% of new
3rd week: 75% of the new and 25% of the current
4th week onwards: 100% of the new
3. Feed (Dog Food) the pup (3 TIMES A DAY) with 4 Table Spoon Full Dog Food per meal serving. Add One table spoon per serving every month thereafter.
 - Note: The puppy is used to eating soft dog food, meaning, you need to add water to the dry food and let it stand for a few minutes. When you see that the dog food is soft, then it is ready to serve.
4. Making sure it has clean water each day. The pup is already trained to drink in a Water Feeder that came along with the crate during shipping.
5. Providing the pup vitamins. Give him/her 1.0ml of Ceelin and 1.0ml TikiTiki once every day. The pup is already trained to take vitamins via a syringe. Since you will be bring the pup to a Vet. You can ask your vet what vitamin that he / she will recomend.
6. **Making sure that you continue his/her vaccinations. Your pup is due for his / her 2nd vaccination 5 days after the pup arrived in your home.**
7. Leave the towel with the pup for a few days. The towel has the scent of his/her Mom and siblings. If he/she smells a familiar scent, we hope he/she will be reminded of them and be less stressed.
8. Please do not give your dog food anything with chocolate. Chocolates are harmful to them. Peanuts and food with tomato sauce are harm-full as well.
9. Use only Dog Shampoo with Conditioner for bathing. Never use human shampoo.
10. Given them lots of love—pamper them with HUGS and KISSES.
